Rare specimen plants
a specialty.

PLANT LIST

- Arequipa leucotricha - a rare Peruvian with dense gray to reddish spines, fine grafted plants 1" .75 4" \$2.00
- Arthrocerus microsphaerica - small globular branches .35
- Ariocarpus - odd formations often called living rocks, slow growing from seed. We offer only imported blooming size plants: \$2.00
- A. furfuraceus, A. kotschoubeyanus, A. retusus, A. scafarostrus and A. lloydii at \$1.50 each.
- ASTROPHYTUM
- asteria - the "sea urchin", low, spineless bearing a yellow flower with red center 1" seedling .35
- myriostigma potosina - the "Bishop's Cap" 1" seedling .25
- myriostigma coahuilensis - the whitest one of the group 4" imported specimens only, blooming size 2.00
- capricorne senilis - the spiny one with long greyish tortuous spines. A few large imported plants of flowering size about 5" 2.50
- ornatum - with yellow spines and flowers S .35
- ARMATOCEREUS laetus - a rare Peruvian species of columnar habit G .75
- CARNEGIA gigantea 2" seedlings. .25
- CEPHALOCEREUS
- glaucescens - bluish body with fine yellow spines, a beauty, large 4" seedlings .50
- royenii - erect dark bodied plant edged with woolly spine cushions. West Indian 6" S .75
- senilis - the "Old Man" of Mexico, seedlings 1" .25 3" \$1.00, imported specimen 5" \$2.00
- CEREUS
- peruvianus - 4" S .15, 6" .25. finest grafting stock for slow growing kinds. 10 plants 1.00
- peruvianus monstrosus - a strange, freakish form covered with knotty knob-like growths 5" .35 large specimens \$1.00
- COPIAPOA
- cinerea - a very rare Chilean species with greyish ashy body and strong brownish to black spines, greatly-desired by the rare cactus collector, small grafted plants \$1.00, larger \$2.00
- CORYPHANTHA
- arizonica - pretty clustering species .35 to .50
- aggregata - white spined clustering, from Arizona, large clump with many heads .75
- georgii - large imported specimens, flowers freely 5" 1.50
- robustispina - the largest growing Coryphantha with large tubercles and strong spines 5" specimen .90
- vivipara - nice clustering pink flowered, single headed plants .35
- DENDROCEREUS
- nudiflorus - Cuban tall, fast growing 4" S. .35, 6" .60
- DOLICHOTHELE
- sphaerica - low, clustering with large yellow flower. A good pot plant. Small seedlings .25

The following abbreviations are used in this list:
G - grafted plant, S - seedling, fl - flower.

- ECHINOCACTUS - globular Mexican cacti of the barrel types but pretty pot plants as seedlings.
ingens - grey green with reddish markings on body, small seedling .20, large specimen 4" .50
grusonii - the "Golden Barrel" - 1" S .25
- ECHINOCEREUS - usually grow in clusters of many stems and are among the finest flowering of all cacti. Flowers range from yellow to red and purple. Good pot plants and fairly hardy.
augusticeps - a dwarf clustering kind .35
barthelownus - a rare small one from Lower California .50
blanckii - slender finger-like branches, large purple flower .25
engelmannii - the Calif. "Hedge-hog", very spiny .25
knippelianus - shiny dark green body with few spines, an easy one to grow - always attractive S .35
luteus - imported plants, blooming size from Sonora, Mex. 1.00
pacificus - a rare red flowered one from Lower Calif. .35
reichenbachii - the dainty "Lace Cactus" - pink flower .20
pulchellus - imported blooming size, low single stemmed rose flower .75
bonkerae - a colorful one from Arizona .50
triglochidiatus - the largest of all this genus, stems about 6" in diameter .75
- ECHINOFOSSULOCACTUS - globular flattened many ribbed cacti with various colored attractive spines. Make sturdy pot plants bearing small yellow to pink flowers. These are fine cultivated specimens mostly flowering size.
albatus .35; crispatus .50; multicostatus .60; vaupelianus .35; violaciflorus .50
- ECHINOPSIS - sometimes called Easter Lily cactus from its early flowers but they also bloom later at intervals throughout the summer. Globular cacti bearing exceptionally large white, pink or orchid flowers.
hamatacantha .30; leucantha .35; multiplex .25; large specimens .50; violacea .25; eryseii .25, fl size .50; calochlora, a shiny golden green plant .25, fl size .60
- ERIOCEREUS - Tall, rapid growing, white, night flowering, suitable for outside planting in southern states in orange climates. Fine rooted cuttings about one foot long which will usually bloom the following season.
guelitchii, martinii, pomanensis or tortuosus at .50
Smaller unrooted cuts .25 each. Root easily.
- ESPOSTOA - white wooly from the Peruvian Andes.
lanata - S .50, larger size about 4" \$1.00
- FEROCACTUS - The well known barrel cacti of the American deserts. Seedlings bear colorful spines and thrive as potted plants but want plenty of sunlight. Sturdy seedlings are offered of this group.
alamosanus .20; coloratus .25; electracanthus .20; covillei .35; latispinus .15; mathsonii .40; orcuttii .30; viridescens .25; wislizeni .15.
- GYMNOCALYCIUM - Low globular South American cacti with large fine flowers, especially fine for pot plants indoors. Large flowering size specimen plants are available.
gibbosum 3" 1.50; mihanovitchii .50; quehlianum 3" 1.00; anistii 3" 1.50; saglicone .75

HAMATOCACTUS

setispinus - A freely blooming easily grown plant with large yellow red centered flowers. Fl. size .35

LEMAIREOCEREUS

beneckii - "Silver Tip Cactus" - A bluish gray bodied columnar kind, the growing tips of which are frosty white. 6" .50, 12" .90.

montanus - From the mountains of Sonora, Mexico, bearing colorful brown spines and wooly areoles. 6" .60

pruinus - a fast growing four angled one, more bluish than the beneckii. Seedlings .25.

stellatus - robust with star-like spine clusters. Fine 10" specimens .80, larger branched ones \$1.20.

Watch for our illustrated catalog of thousands of fine seedling cacti and other rare succulents next spring.

LEUCHTENBERGIA

principis - "Agave Cactus" - Large imported specimens bearing long three angled tubercles resembling an Agave more than a cactus. Very odd and rare \$1.50.

LOBIVIA - This genus consists of small globular, single or many headed clusters bearing large showy flowers after several years growth. Fine pot plants.

allegriana - bright green body, scarlet fl. .35

aurea - easiest to flower (large golden) small .35 fl.size .50 large specimen clusters \$1.25.

backebergii - pretty pea-green body, bright carmine fl. rare .60

binghamiana - freely clustering, dull red fl. small clusters .35

boliviensis - red fl., long spines. .40

caespitosa - yellow and red flower .30

corbula - orange-red fl. a rare new discovery G .70

cylindrica - heavy black spines, large yellow fl. .50

drijveriana - pectinate grey spines, yellow fl. G .40

famatimensis - the most attractive plant of all with a chocolate brown body and short pectinate brownish spines, fl. very large, dark red tulip shaped G .50, larger grafted specimens with offsets \$1.00, small plants on own roots .60

famatimensis var. setosa - with short white bristly spines, flower yellow G small .40, large \$1.00, smaller on own roots .60

haageana (type) yellow fl. with green stigma G .40

Haageana var. chrysantha - golden yellow fl. G .40

hermanniana - a rare new one fl. violet-rose .80

hertrichiana - fast growing easily flowering, light red fl. .35

higginsiana - bright green body, fl. wine-red and yellow G .60

jajoiana - with whitish radial spines and black central, wonderful red flower with black throat G .40, on own roots .60

jajoiana var. fleischeriana - with black hooked central spine G .50

janseniana - greyish green body, black spined, fl. yellow G .50

leucorhodon - another hooked spine species with lilac-rose fl. G .60, on own roots .75

longispina - sturdy plants with heavy hooked spines .65

mistiensis - with a peculiar blue-greyish-green body, fl. rosewood colored, from near Misti volcano, Peru at an altitude of 11,500 feet. G .60, on own roots .80

nealeana - small bodied, fl. large bright red G .40

neo-haageana - grows in small clumps with greyish green body tinged with red and short harmless spines, fl. salmon, from North Argentina G .35, larger G .50

pentlandii - long spined Bolivian species, fl. red G .40

polycephala - a new one with fiery-red fl. G .60

pseudocachensis - small clustering species with short brownish spines, fl. bright deep red G .35

pseudocachensis var. cinnabarina - cinnabar red fl. G .40

pseudocachensis var. sanguinea - dark blood red fl. G .40

raphidacantha - bears the longest reddish spines of all, a very beautiful species G .75

rebutioides - attractive dark brownish body, fl. citron-yellow, large grafted specimens .75

LOBIVIA (Continued)

- rubescens - a heavily spined variety, the new spines red, later turning grey, fl. light yellow. G .50, large flowering size on own roots \$1.50.
- wegheiana - long bright spined, flower lilac, from the highest Andes of central Bolivia, rare G .75, very large grafted specimens \$1.75

The above genus (Lobivia) is one of our specialties and is a fine one for the advanced collector who wishes to specialize. We have probably the largest collection in the United States which includes many not listed above, available as propagation is possible. They prefer full sun with a rest period in the winter. They are hardier than most cacti from South America as grown here in Southern California.

LOPHOCEREUS

- sargentianus - heavy columnar species 10" .70
- schottii - 3" seedlings .25
- schottii monstrosus - the "Totem Pole" - a unique spineless form like a rough jade column, very desirable. Fine 12" specimen \$4.00

LOXANTHOCEREUS

- eriotrichus - a rare new discovery from the Rimac Valley of Central Peru, columnar with yellowish white spines, fl. slender, red Two inch grafted specimens \$1.00

MACHAEROCEREUS

- eruca - the "Creeping Devil Cactus" from vicinity of Magdalena Bay, Lower California, grows prostrate, covered with heavy vicious spines 3" S .35, 6" .90
- An immense seven foot imported specimen in perfect condition \$35.00 f.o.b. our shipping point.
- gummosus - similar to above but grows upright, 12" specimen \$1.25

MALACOCARPUS

- vorwerckianus - rare globular flattened species, fine specimens over 2" nearly mature size \$1.00

MAMILLARIA

- albescens - white spined, easily grown 2" .40
- albida - white radials, dark centrals, fine 2" .40
- blossfeldiana S. .25
- bocasana - woolly white with hooked red spines fl. size .50
- camptotricha - "Bird's Nest Mamillaria" S. .25
- large specimen clump 1.00
- candida var. rosea - 5" imported specimen .75
- caput medusae - flattened, short spines, fl. pink, fl. size .60
- celsiana - creamy-yellow spines, handsome large imported fl. size specimens 7" 1.50
- compressa - bright green body, long white spines, fl. light pink, beautiful specimen .90
- crucigera - small flattened species with central spines in form of a cross, fl. size .75
- decipiens - nice specimen clusters, fl. white 1.00
- densispina - dense golden yellow or whitish spined, imported fl. size .75
- gracilis var. fragilis - sprouts offsets freely which are easily detached to form new plants .25
- gracilis var. pulchella - smaller in every way than the above species, very neat for the small bowl .25
- haageana - imported, fl. size very attractive .75
- hahniana - white, hairy, fl. red in a circle around the top of the plant in early spring - be sure to get this one. Imp. fl. size .80
- heeseana - large fine fl. size 1.00
- hemisphaerica - body half-sphaerical, fl. creamy-white .40
